

TMC Quote

Pre-Sales Web App — Function-by-Function Walkthrough

Demo & presentation document

Prepared by: Safi Ullah • TMC

Date: 6 May 2026

Overview

TMC Quote aik web app hai jo pre-sales team ke liye banaayi gayi hai — Excel-based quote authoring se nikal kar structured, version-controlled, approval-driven workflow par shift karne ke liye. App Odoo (system of record) ke saath hybrid model par chalti hai: customer / employee / opportunity master data Odoo se read hota hai, magar saari authoring, scenarios, approvals aur versioning web app ke andar hote hain. Sirf final approved quote Odoo mein push hota hai (sale.order + lines + project.coding etc.).

Yeh document app ke har function (10 views) ko aik aik kar ke walk-through karta hai, har view ke saath actual screenshot, summary, aur key features list ke saath.

Quick Stats

- 10 functional views: Dashboard, New Quote, Quote Builder, Travel Plans, Payment Plan, Scenarios, Approvals, Versions, Push to Odoo, Architecture
- Backend: Python stdlib HTTP server (server.py) + JSON-RPC bridge to Odoo at <http://localhost:8090>
- Frontend: single-page index.html (~107 KB) + app.js (~78 KB), no framework dependency on the demo build
- Run command: run.bat → server listens on <http://127.0.0.1:5066/>

1. Quote Dashboard

All active, pending and won quotations for pre-sales team

Yeh app ka home screen hai. Pre-sales team yahan apni saari quotations dekhti hai — kaunsi draft mein hain, kaunsi L1 / L2 / L3 approval ke liye lagi hain, kaunsi Odoo mein push ho chuki hain, aur kaunsi reject ho gayi hain. Top par 4 KPI cards hain: Active Quotes, Pending My Approval, Won Value (current quarter), aur Win Rate.

Screenshot

Figure: Quote Dashboard view from the running web app.

Key Features

- Top 4 KPIs: active count, pending approval, won value (PKR), win rate
- Recent Quotations table: Quote ID, Customer, Project, Duration, Budget, Price, Margin, State, Owner
- State pills: Scratchpad / Draft / L1 / L2 / L3 Pending / Approved / Pushed-Won / Rejected
- Row actions: Open, Push, View, Revise (state ke hisaab se)

2. New Quote — Form Entry

Pre-sales fills structured inputs · grid is generated automatically

New Quote view aik structured form hai jahan pre-sales team Excel ke bajaye directly fields fill karti hai.

Customer, opportunity, project name, dates, budget, costing basis (HR / margin / inflation), aur skill / resource plan yahin se enter hote hain. Grid khud ban-ti hai — koi ad-hoc cells nahi.

Currency

PKR (base)

2 • Budget & Commercial Basis

Pre-Budget Available?

Yes — customer shared budget

Budget Amount (PKR)

45000000
Shown only if pre-budget = Yes

Costing Basis

Cost Ceiling — fit cost under budget

Target Margin %

15

Skill Rate Selector

Mean
From Odoo skill.master

CTC Increment Factor

1.15
March-year cross-over auto-applied

3 • Skill & Resource Plan

+ Add Row

HR Cost (CTC) auto-populates from Odoo skill.master based on Skill + Seniority. Pre-sales can override per row (shown in amber).

SKILL / ROLE	SENIORITY	WAVE	ALLOCATION %	DURATION (M)	COUNT	HR COST / MONTH (PKR)	SOURCE	LOCATION	CURRENCY	
Project Manager	Senior	W1	100	6	1	1,250,000	Odoo	Onsite - KSA	SAR	x
SAP FI Consultant	Senior	W1	100	6	2	980,000	Odoo	Onsite - KSA	SAR	x
SAP MM Consultant	Mid	W1	100	4	2	650,000	Override	Offshore - PK	PKR	x
ABAP Developer	Mid	W2	60	3	3	580,000	Odoo	Offshore - PK	PKR	x
Basis Administrator	Senior	W3	50	6	1	1,395,000	Odoo	Offshore - PK	PKR	x

Odoo = default from skill.master (auto-fetched on Skill + Seniority change) Override = pre-sales typed a custom salary (logged in audit)

4 • Travel (Component-Based, Not Lump Sum) — All fields editable

Defaults from Odoo travel.policy. Click any amount to override for this quote. Totals recalc automatically.

Local Travel (per trip)

Odoo default

COMPONENT	AMOUNT (PKR)	BASIS
TADA (per diem)	75,000	10 days × 7,500
Flights (return)	100,000	Economy
Accommodation	300,000	10 nights × 30k
Local Transport	22,000	Uber/taxi
+ Add component	0	Custom
Total per trip	497,000	

International Travel (per trip)

Odoo default

COMPONENT	AMOUNT (PKR)	BASIS
TADA (per diem)	900,000	15 days × USD 120 × 282
Flights (return)	300,000	Economy Intl
Visa	80,000	KSA Business
Accommodation	720,000	15 nights × USD 170
Local Transport	100,000	In-country
+ Add component	0	Custom
Total per trip	2,100,000	

No. of Local Trips

4

No. of International Trips

2

Grand Travel Total (PKR)

6,188,000

5 • Direct Costs (Software, Licenses, Infra) — All cells editable

Totals & grand total recalc on any change.

ITEM	CATEGORY	QTY	UNIT COST (PKR)	TOTAL	
SAP S/4HANA Cloud Test Env	License	1	850,000	850,000	x
BTP Integration Suite	License	1	420,000	420,000	x
Training Material Printing	Other	1	120,000	120,000	x
GRAND TOTAL				1,390,000	

+ Add Direct Cost

Figure: New Quote — Form Entry view from the running web app.

Key Features

- Sections: Opportunity → Budget & Commercial Basis → Skill & Resource Plan
- Travel (component-based, not lump sum) — local + international plans
- Direct Costs (software, licenses, infra) editable per line item
- Validation: budget vs price, margin %, gauge meters

3. Quote Builder — Grid Workspace

Wave-by-wave resource allocation with monthly cost rollout

Builder Excel-style grid hai jahan resources ko months par distribute kiya jaata hai. Har wave (Discovery, Build, Stabilize) apni tab mein hoti hai. Allocation %, location (onsite/offshore), seniority, aur monthly counts edit karne par totals real-time recalculate hote hain.

Screenshot

Figure: Quote Builder — Grid Workspace view from the running web app.

Key Features

- Tabs: Wave 1 Discovery / Wave 2 / Wave 3 / Deploy / Hypercare
- HR Subtotal + Direct Costs + Travel auto-rollup to Grand Total Cost
- Pre-Sales Guardrails: HR % $\geq$ 70%, ARAP & Senior PM month thresholds
- Inline alerts when allocation breaks rules

4. Travel Plans

Local + international travel detail per wave

Travel ko component-wise modeled kiya jaata hai (lump sum nahi). Local trips (per-trip ticket + accommodation + local transport) aur international trips (visa, flight, lodging) alag alag track hote hain. Total travel cost grand total cost mein automatic add ho jaata hai.

Click any trip cell to edit. Per-row total and grand totals update automatically.

TRIP #	RESOURCE	TYPE	FROM → TO	MONTH	DAYS	TADA	FLIGHTS	VISA	ACCOM.	LOCAL	TOTAL	
T-001	Project Manager	Intl	Lahore → Riyadh	Jan 2027	15	900,000	300,000	80,000	720,000	100,000	2,100,000	x
T-002	SAP FI Sr #1	Intl	Karachi → Riyadh	Jan 2027	15	900,000	300,000	80,000	720,000	100,000	2,100,000	x
T-003	SAP MM Mid #1	Local	Lahore → Karachi	Feb 2027	10	75,000	100,000	0	300,000	22,000	497,000	x
T-004	SAP MM Mid #2	Local	Lahore → Karachi	Feb 2027	10	75,000	100,000	0	300,000	22,000	497,000	x
T-005	ABAP Dev #1	Local	Islamabad → Lahore	Mar 2027	10	75,000	100,000	0	300,000	22,000	497,000	x
T-006	Basis Admin	Local	Islamabad → Lahore	Apr 2027	10	75,000	100,000	0	300,000	22,000	497,000	x
TOTAL						2,100,000	1,000,000	160,000	2,640,000	288,000	6,188,000	

Travel Policy Reference (from Odoo)

TADA (International / day)	USD 120
TADA (Local / day)	PKR 7,500
Flight Class (Intl)	Economy
Accommodation Band (Intl)	USD 170/night
Visa (KSA Business)	USD 285

Trip Economics

- 2 International trips (Wave 1 kickoff)
- 4 local trips (cross-city coordination)
- Travel = **15.2%** of total cost
- Auto-flag if travel > 20% of cost (requires L2 approval)

Figure: Travel Plans view from the running web app.

Key Features

- Local trips section + International trips section
- Editable per-trip rates with auto-calculated totals
- No. of trips × rate = leg cost; legs sum to grand travel total
- Approved values flow into final price calculation

5. Payment Plan

Milestone schedule and finance terms for the customer

Payment Plan section quote ke commercial side ko cover karta hai — kab kab invoice raise hogi, milestones kya hongi, aur kis percentage par. Yeh data later Odoo mein push hone par sale order ke payment terms ban jaata hai.

Screenshot

Figure: Payment Plan view from the running web app.

Key Features

- Milestone-based percentage breakdown
- Currency, tax basis, retention amount fields
- Linked to project schedule (waves)

6. Scenarios

Compare alternate pricing/resource cases side-by-side

Pre-sales akser 2-3 scenarios bana ti hai — base case, aggressive case, fallback case. Yeh view unko side-by-side compare karta hai bina alag alag Excel files banaye. Choose karne ke baad winning scenario approval mein jaati hai.

Screenshot

	Scenario A Baseline · 6m · 12 res <i>Selected</i>	Scenario B Lean · offshore-heavy	Scenario C Aggressive · 4m compressed
Duration	6 months	6 months	4 months
Resources	12	9 (-3)	15 (+3)
Onsite FTE-months	18	8 (-10)	24 (+6)
HR Cost	35.1M	27.4M	40.8M
Travel Cost	6.5M	3.1M	6.5M
Direct Cost	1.4M	1.4M	1.4M
Total Cost	42.99M	31.9M	48.7M
Budget % Used	95.5%	70.9%	108.3% ▲
Margin %	15%	15%	15%
Quoted Price	50.57M	37.55M	57.30M
Risk Level	Low	Medium	High
Action	Select	Select	Select

AI Assessment
 Scenario A (baseline) is the recommended submission. Scenario B sacrifices onsite presence which SABIC typically requires for Wave 1 blueprint signing — likely to be rejected by customer. Scenario C exceeds the customer's stated budget — requires L3 pricing committee approval before submission.

Figure: Scenarios view from the running web app.

Key Features

- 3-column comparison: assumptions, totals, margin %
- Mark winner → submitted to approval flow
- Versions retained for audit trail

7. Approvals (L1 / L2 / L3)

Web app approval workflow — Odoo only sees the final approved payload

Yeh app ka governance heart hai. Approvals web app ke andar hote hain (Odoo ke andar nahi), kyun ke web app par custom SLAs, threads, diffs, aur contextual deviation checks possible hain jo Odoo ke generic approval engine se nahi ho saktay. Sirf last approved quote Odoo mein push hota hai.

Screenshot

TMC Quote Pre-Sales Web App Q/2026/0042 Scratchpad - V3 SU

Approval Workflow
All approvals happen **inside the web app** — Odoo only sees the final approved snapshot

Approval Pipeline

- Scratchpad** (Safi U. - 20 Apr)
- L1 · Team Lead** (Umer F. - 21 Apr)
- L2 · Delivery Head** (Aisha M. - Pending)
- L3 · Pricing Committee** (Bilal K. - Not started)
- Approved** (—)

Deviation Checks (Auto)

RULE	LIMIT	ACTUAL	STATUS
Margin $\geq$ 10%	10%	15%	Pass
Budget Used $\leq$ 100%	100%	95.5%	Pass
Travel $\leq$ 20% of cost	20%	15.2%	Pass
Senior Ratio $\leq$ 50%	50%	42%	Pass
Onsite FTE-m $\leq$ 25	25	18	Pass
CTC Factor matches Policy	1.15	1.15	Pass
All Resources Skill-Mastered	100%	100%	Pass

□ If any rule fails, the quote is auto-escalated to L3 (Pricing Committee).

Approval Thread

- Safi U.** - 20 Apr, 14:32 - Scratchpad
Submitted V3. Adjusted ABAP allocation to 60% for Wave 2 per Umer's guidance.
- Umer F. (L1)** - 21 Apr, 09:18 - Approved
Resource mix looks right. Blueprint assumptions are reasonable. Passing to L2.
- Aisha M. (L2)** - 22 Apr, 11:04 - Comment
Why 2 Senior FI for 6 months? Onsite cost is ~PKR 13.5M for FI alone. Can we rotate 1 Sr + 1 Mid from Wave 2 onwards?
- Safi U.** - 22 Apr, 11:40 - Reply
SABIC blueprint governance requires 2 Sr FI during sign-off. Will clone Scenario B as alternative with rotation — attached now.

Actions: Request Changes, Approve as L2, Post, Print

△ Approval happens in the web app (not Odoo)
L1/L2/L3 sign-offs, comments, deviation logs, version diffs — all captured here. Odoo receives **only the final approved payload** when "Push to Odoo" is clicked. This keeps pre-sales iteration fast without cluttering Odoo with scratchpad data.

Figure: Approvals (L1 / L2 / L3) view from the running web app.

Key Features

- Pipeline: Scratchpad → L1 Team Lead → L2 Practice Head → L3 Pricing Committee → Approved
- Deviation Checks panel: margin, budget headroom, travel %, senior PM months, CTC factor, retained allowance

- Approval Thread with author + date + comments per level
- Request Changes & Approve actions per role

8. Versions

Audit trail of every revision with diff against previous

Har time pre-sales kuch change karti hai aur save karti hai, aik new version create ho jaati hai. Yeh page un sab versions ka chronological list dikhata hai with author, timestamp, aur key field deltas. Click karne par diff view khulta hai.

Screenshot

Version Timeline
Every save creates an immutable snapshot — diff, revert, or branch any version

Compare Selected [+ New Version](#)

Scratchpad Versions

Version	Author	Timestamp	Change Summary	Cost	Price	Diff	Restore
V3	Safi U.	22 Apr 2026, 11:40	Reduced ABAP allocation to 60%, added Wave 2 dependency notes	42.99M	50.57M	Diff	
V2	Safi U.	21 Apr 2026, 16:20	Added Basis Admin (50%), corrected Mid CTC from 580k to 620k	43.81M	51.54M	Diff	Restore
V1	Safi U.	20 Apr 2026, 14:32	Seed from form-entry (12 resources, 6-month plan)	44.25M	52.06M	Diff	Restore

Approved Versions

Version	Author	Timestamp	Change Summary	Cost	Price	Diff	Restore
V0	—	—	(none yet)				

V2 -> V3 Diff

Field	V2	V3	Change
ABAP Dev #1 / Mar'27	100%	60%	-40%
ABAP Dev #1 / Apr'27	100%	60%	-40%
ABAP Dev #2 / Mar'27	100%	60%	-40%
ABAP Dev #2 / Apr'27	100%	60%	-40%
HR Subtotal	35.89M	35.07M	-820K
Total Cost	43.81M	42.99M	-820K
Quoted Price	51.54M	50.57M	-970K

Figure: Versions view from the running web app.

Key Features

- Linear history of saves: V1, V2, V3 ...
- Per-version: author, timestamp, change summary
- Diff view (added / removed / modified rows)
- Restore-to-version option for rollback

9. Push to Odoo — Final Gate

Only this step touches Odoo; everything else stays in the web app

Yeh aakhri stage hai. Jab L3 ne approve kar dia hai, tab ek approved payload Odoo ke target tables (sale.order, sale.order.line, project.coding, etc.) ko INSERT karta hai via tmc_api custom addon endpoints. Push ke baad confirmation preview aur Odoo doc URL show hoti hai.

What Happens When You Click "Push"

1 Freeze Web App

Quote state → "Pushed / Read-only". No further edits in web app.

2 POST to Odoo

Bearer-token call to /api/v1/quotation/ create via tmc_api.

3 Odoo Creates SO

sale.order draft, lines, project.costing header, auditlog entries.

4 Returns Odoo ID

Web app stores Odoo SO number & URL. Link shown to pre-sales.

Post-Push Confirmation Preview

ODOO SALE ORDER
500432

ODOO PROJECT COSTING
PC/2026/0042

ODOO URL
odoo.tmc.com/web?id=432&model=sale.order

Guardrails before Push is enabled

- L1 + L2 + L3 approvals all Green ✓
- No deviation-flags unresolved
- Customer / Opportunity linked to valid Odoo records
- Currency & payment terms confirmed by commercial team
- Version locked (no edits in last 60 seconds)

Figure: Push to Odoo — Final Gate view from the running web app.

Key Features

- Approved Payload Summary panel (left) — final figures snapshot
- Odoo Target Tables panel (right) — sale.order, sale.order.line, project.coding, payment terms...
- 4-step flow: Freeze → POST → Odoo creates SO → Returns Odoo ID
- Quadrants before push enabled: L3 OK, sign-off, rate card valid, currency match
- Confirmation preview with bearer-token Odoo link

10. Architecture Reference

Hybrid architecture — web app for authoring & approvals, Odoo as system of record after push

Architecture page in-app reference hai team aur new joiners ke liye. Data flow, field sourcing map (kaunsa field kahan se aata hai), technology stack, aur rationale (why web app owns everything until push) yahan documented hain.

Screenshot

Figure: Architecture Reference view from the running web app.

Key Features

- Data Flow diagram: Web App ↔ tmc_api ↔ Odoo
- Field Sourcing Map: Dropdowns (Odoo GET), Real-time calc (Web App JS), Manual type (Pre-sales), Push-only (Web → Odoo)

- Tech Stack: Next.js 14 + Tailwind, Node/Nest (REST) + PostgreSQL, SAML SSO with Odoo, Whisper → LLM → TTS voice (Phase 2)
- Why Web App owns everything until push: pre-sales iterates dozens of times per quote; Odoo stays clean

Closing Notes

Yeh document app ke current demo build par based hai (April 2026 cut). Screenshots app ki UI sample data ke saath ho rahi hain — production mein actual quotation records aur Odoo se live data dikhega. Voice + LLM phase 2 mein add hone wala hai (Whisper → LLM → TTS), iska detail Architecture page par mojud hai.

End of document.
